Résumé

Matthias Lischka

PROFESSIONAL EXPERIENCES

Senior Software Developer at TechTalk, 10/2014 – 09/2018

Throughout my time at TechTalk I was sent to different customers to support their software development teams on-site. This included programming, research and development, leading teams as technical lead, train people on TDD/BDD (Specflow) and Git, ensuring code quality, helping out as Scrum Master and supporting requirement engineering and product owners.

In addition I was involved in many bids within TechTalk, offering technical concepts and rough estimations for large-scale projects.

Software Developer at TechTalk, 03/2010 – 09/2014

After an internship I was hired as Software Developer to continue supporting the team I started in. In the beginning I was writing BDD tests (Specflow) and small features, followed by bigger features and working independently. Next I was maintaining and extending legacy applications for our customers.

TWO MOST RECENT PROJECTS

FONDS SOZIALES WIEN, 2016 – 2018

Technical lead of a seven-person team, intermediate **Scrum Master** in the beginning. 4 Scrum teams à 7 people, Scrum of Scrum (SOS).

Areas of responsibility: Quality of code, technical coordination with other teams, revision of requirements, planning and rough estimation of upcoming projects, co-creation of overall architecture, developing features, prototyping & proof of concept.

Technical setup: C# .Net Core Web API Microservice Backend with CQRS and MSSQL, Angular Micro-Frontend connected to Backend via Swagger, several legacy applications with ASP.Net Webforms and Oracle, data migration, Microsoft Azure DevOps, Domain Driven Design, SOAP Services between Backends.

RUBICON, 2014 – 2016

Senior Software Developer. Started in the "Research & Development" branch for the ActaNova product. After that I was reassigned to support a critical project (Bundesministerium für Inneres). 3 Scrum teams à 7 people, Scrum of Scrum.

Areas of responsibility: Research, prototyping, planning and implementing of features in and for ActaNova, rough estimations of backlog and upcoming packages, pull requests and quality of code.

Technical setup: ActaNova, C# .Net, ASP.Net Webforms, SOAP Service Interfaces, MSSQL, Team City, re-motion.
